About This Video

Land is a finite resource. Land is the source of all our food. Today, 1.02 billion people already go to bed hungry. Two billion more suffer from malnutrition. By 2050, we will need to double food production as world population grows by 3 billion. But there is only 5% more arable land available on Earth. Whats the way forward? Leading food and agriculture scientists from the United States, Africa, and Europe ponder the future of food.

Featuring

- Pamela Ronald**
Plant Pathologist
- Monty P. Jones**
Agricultural Geneticist
- Louise O. Fresco**
International Food & Agriculture Specialist

Watch The Full Program

- Food 2.0: Feeding a Hungry World**
Pamela Ronald, Louise O. Fresco, Bill Blakemore, Monty P. Jones
Can we bridge the ideological divide over genetically modified foods that separates scientists and environmentalists? What role does eating and farming locally play in the next green revolution?
